Shio Runtime Documentation Editing Policy

This policy defines how the canonical `ARCHITECTURE.md` is produced from the existing architecture documents.

Its purpose is to improve readability, consistency and maintainability without changing the architecture itself.

Allowed Editorial Changes

1. Restructure

Sections may be reorganized to improve logical flow.

The order of topics may change if it improves readability.

2. Reorder

Chapters and subsections may be moved to more appropriate locations while preserving meaning.

3. Remove Duplication

Repeated explanations, repeated definitions and repeated architectural statements shall exist only once in the canonical document.

Duplicate content may be replaced with cross-references.

4. Unify Terminology

Equivalent terms shall be normalized into one canonical terminology.

The same architectural concept shall never be described using different names.

5. Consolidate Definitions

Each architectural concept shall have exactly one primary definition.

Other chapters shall reference that definition rather than redefining it.

6. Add Cross References

Related chapters may reference each other whenever this improves navigation and avoids duplication.

7. Improve Readability

Editorial improvements are allowed, including:

- paragraph restructuring;

- heading normalization;
- consistent formatting;
- list normalization;
- table normalization;
- consistent wording.

These changes must not alter architectural meaning.

Forbidden Changes

1. No New Architectural Concepts

The editor shall not introduce concepts that are absent from the original documentation.

2. No Renaming of Architectural Entities

Existing Runtime names, architectural layers, principles and terminology shall remain unchanged unless inconsistent within the original documents.

3. No New Architectural Layers

The document structure may change.

The architecture itself may not.

4. No Architectural Interpretation

The editor shall not strengthen, reinterpret or extend existing architectural ideas.

Only explicit information from the original documents may be included.

5. No Responsibility Changes

Responsibilities shall never be reassigned.

Ownership defined by the original architecture remains authoritative.

6. No Behavioral Changes

Editorial work shall never modify Runtime behavior, contracts, boundaries or architectural guarantees.

Source of Truth

The original architecture documents remain the sole source of architectural meaning.

The canonical `ARCHITECTURE.md` is an editorial consolidation of those documents.

Whenever editorial convenience conflicts with architectural accuracy, architectural accuracy takes precedence.
